TECHNOLOGIES

XF: XtendFlex® Soybeans

E3: Enlist E3® Soybeans

STS®
herbicide tolerant trait

E3S: Enlist E3® Soybeans with STS®

Ratings: E = Excellent, G = Good, A = Average, F = Fair, P = Poor, NA = Not Available

Plant Height: M = Medium, MT = Medium Tall, Tall = Tall

Plant Type: MT = Medium-Thin, M = Medium (moderate side branching), MF = Medium-Full, F = Full (bushy)

Phytophthora Tolerance: (Rc) = Rps 1c, (Rk) = Rps 1k, (Rc3a) = Rps 1c and Rps 3a

Definitions: BSR = Brown Stem Rot, PPO = Protoporphyrinogen Oxidase Inhibitor, SCN = Soybean Cyst Nematode, SDS = Sudden Death Syndrome

<p>Broad-acre variety. Great SDS protection. Use some caution with metribuzin, but it should be fine. Iron chloroses is a concern on high pH soils.</p>	
<p>Works across all yield environments. Is sensitive to metribuzin. Manage placement on high SDS pressure fields. White mold resistance is average.</p>	
<p>Taller plant that stands well. White mold is fair, so in fields with pressure, use lower populations or increase row spacing and consider a fungicide.</p>	
<p>Medium-tall plant that is bushier but stands. Good on white mold, resistant to BSR, and average on SDS. High yield potential. Solid performance.</p>	
<p>Outstanding yield especially in our area in 2023. Solid agronomics with a strong defensive package including SDS and no real weaknesses except IDC.</p>	
<p>Solid but not real defensive. Has good stress tolerance. Medium-tall plant that stands fairly well. SDS resistance is above average. No gene for BSR.</p>	
<p>Can handle some stress. Peking SCN resistance. Works across all environments, soil types, and yield levels. Good against SDS. Has BSR resistance.</p>	
<p>Handles stress well. Yielded well in 2023. White mold resistance is average so manage accordingly. Yields well even when SDS pressure is heavy.</p>	
<p>High- or low-yield environments. 2933CE3S or 3333CE3 would handle stress better. Good Phytophthora and SDS scores. Thinner-upright plant.</p>	
<p>Peking cyst nematode resistance. Great stress tolerance. Does well in low- or high-yield environments. Handles SDS. Very good Phytophthora tolerance.</p>	
<p>Very good SDS score. Works well under stress or high yields. Good against charcoal rot. No gene but very good Phytophthora tolerance.</p>	
<p>Very good SDS score. Nice plant style. Good on Charcoal Rot and Frog-eye Leaf Spot. Great late-season plant health. Sulfonylurea herbicide tolerance.</p>
