¹ Lodging scores were only taken in 5 of the 6 plots. Some/most hybrids were not included in all the plots. Interpolated values were used to determine the "6 Plot Average" when these data were missing. When interpreting the data, realize that the 6 plot averages using missing/interpolated data are not as "strong" as they would be for averages where there are no missing data. Also, the 6 Plot Average lodging score is the average for 5 plots. Scores are from 10 to 1 with 10 being best. No lodging scores were taken in the Pike Township Section 4 replicated plot.
